Subjects

Accounting standards
role of accounting standards in valuation in Hong Kong, 172

Agricultural land
agricultural farmland as conservation element in comprehensive plan, 226

impact of Section 1031 tax-deferred exchanges on agricultural land values, 57–65

timberland as agricultural property, 214

Appraisal regulation
provisions of federal interagency appraisal guidelines, 250–256

quality control ensures compliance with regulations, 243

valuation standards in Hong Kong, 165–166

Appraisal reports
implementing an internal quality control review process, 241–248

valuation report requirements in Hong Kong, 165–166

Awards
Appraisal Journal Outstanding Service Award, iii (Spring)

Appraisal Journal Sponsorship opportunities, iii (Fall)

Armstrong/Kahn Award, iv (Spring)

Ratcliff Award, vi–vii (Spring)

Swango Award, v (Spring)

Bert J. Harris Act
Florida Private Property Protection Act (Harris Act) compensation for property owners experiencing economic loss from regulatory taking, 45, 53

Best practices
best practices in quality review, 241–249

Capitalization rates
capitalization rates for assets of going concerns, 230, 234–239

capitalization rate in direct capitalization method, 69–73

deriving overall capitalization rate from transactions, 146–153

income capitalization approach and discounted cash flow analysis in valuing economic loss from regulatory taking, 49–54

Commercial property
business enterprise component value, 229–240

commercial property in local comprehensive plans, 224–226

commercial real estate in Hong Kong, 163–164

effects energy-efficient features on commercial property values, 115–125

flood zone revisions and economic loss for commercial property, 44–55

market fundamentals in commercial real estate valuation, 143–154

rent assumptions in valuation of commercial real estate, 155–160

Comprehensive plan
importance of comprehensive plan text in appraisal, 223–224, 227

purpose of a government comprehensive plan, 223–224

standard elements of a government comprehensive plan, 224–227

Cost approach
cost approach as an analytical tool, 152

cost approach in going concern valuation, 236–237

cost approach in timberland valuation, 216

cost approach in valuing economic loss from regulatory taking, 49

Court cases
court cases related to rent reset provisions in long-term ground leases, 314–326

recent state court decisions, 1–8, 93–100, 181–186, 273–278

Department of Energy
Department of Energy reports on energy production, 32–34

Discount rate
deriving the discount rate in wetlands valuation, 131–137

discount rates in transaction markets, 140–152

discount rate and valuing excess earnings, 234

impact of projected rent spikes on discount rates, 155–159

Discounted cash flow
comparison discounted cash flow and direct capitalization, 69–70

discounted cash flow analysis based on a fundamental forecast, 146–152

discounted cash flow in valuation of timberland, 213–216

discounted cash flow analysis for wind farm, 35–41

discounted cash flow analysis and business enterprise value, 233

income capitalization approach and discounted cash flow analysis in valuing economic loss from regulatory taking, 49–54

yield capitalization and discounted cash flow analysis, 68–69

Documentation
documentation of offers, 211

review documentation requirements in interagency guidelines, 255

Energy-efficient buildings
effect of energy costs on monthly rent, 123–124

linkages for energy efficiency characteristics and direct capitalization, 116–118

value effects of energy-efficiency in commercial buildings, 115–125

Environmental Protection Agency (EPA)
EPA policies related to wetlands, 126–134

Externalities
using focus group market research to determine effects of externalities in local markets, 301–313

Feasibility
developing a feasibility model for a wind farm, 35–39

feasibility issues affecting rent reset of long-term ground leases, 315–319

Flood zones
FEMA flood map changes as regulatory taking of property, 44–46

valuation of economic loss from regulatory taking related to flood maps, 44–55

Focus groups
using focus group market research to determine local market conditions, 301–313

Geographic information system (GIS)
GIS-based comparable sale analyses of like-kind exchange and non-like-kind exchange transactions, 60–64

General plan (see comprehensive plan)

Ground leases
issues affecting rent reset of long-term ground leases, 314–326

using focus group market research to determine local market conditions, 301–313

Geographic information system (GIS)
GIS-based comparable sale analyses of like-kind exchange and non-like-kind exchange transactions, 60–64

General plan (see comprehensive plan)

Ground leases
issues affecting rent reset of long-term ground leases, 314–326

Hedonic modeling
using hedonic pricing model to explain rent of office building, 116–123

Highest and best use
considering local comprehensive plan in developing highest and best use opinion, 223–227

determining highest and best use through fundamental analysis, 150

highest and best use for land with timber, 215–217

highest and best use of land with potential as wind farm, 34–35

highest and best use issues affecting rent reset of long-term ground leases, 316–319

land with highest and best use as wetlands, 126–134

Hong Kong
market trends in Hong Kong, 25–27

real estate valuation in Hong Kong, 161–173

Housing markets
alternatives to comparable sales data in housing markets with low sales volume, 205–211

effect of comprehensive plan on housing market potential, 223–227

housing market developments in Europe, 199–204

Income capitalization approach
comparison of transaction and fundamental data in income capitalization approach, 146–149

comparison of direct capitalization and yield capitalization models, 66–73

income capitalization approach in measuring effects of energy-efficient features, 116–124

income capitalization approach in valuation of going concern, 229–239

income capitalization approach in valuing property with wetlands potential, 127–139

using income capitalization approach valuing economic loss from regulatory taking related to flood maps, 47–49

using income capitalization approach in valuing timberland, 216

Intangible assets
intangible assets and the Interagency Appraisal and Evaluation Guidelines, 253

intangible asset value in a going concern, 229–239

intangible assets in wind farm projects, 34

intangible assets and the Interagency Appraisal and Evaluation Guidelines, 253

Internal Revenue Code (IRC)
agricultural land and tax-deferred, IRC Section 1031 like-kind exchanges, 57–65

Interim use
interim use of land with timber, 215–218

International appraising
housing market developments in Europe, 199–204

market trends in Hong Kong, 25–27

market trends in Japan, 24–25

market trends in South Korea, 23–24

real estate valuation in Hong Kong, 161–173

Japan
market trends in Japan, 24–25

Just compensation
Florida Private Property Protection Act (Harris Act) compensation for property owners experiencing economic loss from regulatory taking, 45, 53

Land use regulation
flood maps and effects on land use, 44–56

purposes of government comprehensive plans, 223–224

standard elements of a government comprehensive plan, 224–227

wetlands regulation, 126–130

Leases
effect of leases on capitalization analysis, 70–71

issues affecting rent reset of long-term ground leases, 314–326

leases land on the real estate value continuum, 229–230

minimum appraisal standard for leased buildings, 253, 256

tax-deferred exchanges including leases, 58

wind farm land leases, 34

Licensure
licensure requirements of Interagency Appraisal and Evaluation Guidelines, 254–255

Like-kind exchanges (IRC Section 1031)
comparison of sale prices of land sold to in-state and out-of-state buyers in like-kind exchanges, 62–64

impact of Section 1031 tax-deferred exchanges on agricultural land values, 57–65

Market analysis
market analysis in housing markets with low sales volume, 205–211

market analysis of rent growth, 155–160

market analysis of transaction and fundamental markets, 146–153

Market data
alternative data in housing markets with low sales volume, 205–211

data in projecting commercial rents, 155–160

data required to apply income capitalization approach in analysis of wetlands, 129–135

market data on energy-efficient commercial buildings, 120–124

market data needed to analyze timberland value, 216–219

market data used to compute asset value of going concerns, 235–239

separation of transaction and fundamental market data, 145–153

sources of market data for development of pro forma of going concern, 238

Market rent
gross rent in analysis of investment, 67

impact of energy efficiency on market rent, 115–124

market rent in determining compensation for regulatory taking, 49–53

market rent for real estate component in valuation of going concern, 236–238

modeling market rents, 155–160

Market value
approaches for analysis of market value of timberland, 213–222

effect of sustainability on property market values, 115–125

developing opinion of market value data in housing markets with low sales volume, 205–211

market value definitions in Hong Kong, 166

market value definitions of USPAP and Interagency Appraisal and Evaluation Guidelines compared, 252–256

potential effect of local comprehensive plan, 223–228

schools of thought on determining market value, 146–153

using market rent to distinguish market value from price, 155–160

Matched pairs
matched sales in study of like-kind exchange transaction for farmland, 63

National Council of Real Estate Investment Fiduciaries (NCREIF)
NCREIF Valuation Committee meeting notes, 344–346

Obsolescence
external obsolescence and compensation for takings, 49–53

external obsolescence and market value, 152

Office property
commercial real estate in Hong Kong, 163–164

effects energy-efficient features on commercial property values, 115–125

market fundamentals in commercial real estate valuation, 143–154

rent assumptions in valuation of commercial real estate, 155–160

Profit
measuring profitability in going concern valuation, 237–239

potential profit in timberland valuation, 212–222

wetland mitigation bank profit, 128–132

wind farm developer profit, 35–38

Regression analysis
regression analysis in determining value effects of energy-efficient features, 116–124

regression analysis to estimate wetland mitigation process, 134–135

Regulatory taking
FEMA flood map changes as regulatory taking of property, 44–46

Renewable energy
states' mandated renewable portfolio standards ensure demand for renewable energy development, 31–33

Residential property
alternatives to comparable sales data in housing markets with low sales volume, 205–211

effect of comprehensive plan on housing market potential, 223–227

residential markets in Europe,199–204

Reversion
market rent growth and reversions, 158

reversion calculation for wind farm, 35–39

reversion as fundamental element of an investment necessary for determining capitalization rate, 66–73

reversionary cash flow and remainder value in calculation of takings compensation, 48–50

Risk
adjusting yield rates for risk, 157–159

capitalization rate must match market's expectations for upside potential and risk with forecasted performance, 72

excess earnings in going concern valuation adjusted for risk, 234–236

risk adjustments in wetland mitigation banks, 131

risk considerations in valuing timberland, 215–216

risk in property yield rate, 47–48

risk in wind farm development, 37–38

mitigating risk in appraisal report preparation, 246–247

Rural land
impact of Section 1031 tax-deferred exchanges on agricultural land values, 57–65

Sale price
collecting data on sale prices of properties, 206–207

potential sale price not market value under Interagency Appraisal and Evaluation Guidelines, 254

sale prices of going concerns and asset value, 233–239

transaction prices versus market fundamentals, 143–154

using sales comparison approach in valuation of economic loss from regulatory taking related to flood maps, 44–55

wetland mitigation transaction sale prices, 128–139

Sales comparison
alternatives to comparable sales data in housing markets with low sales volume, 205–211

analysis of comparable sales of farmland based on transaction type, 57–65

sales comparison of mitigation bank transaction, 132–139

sales comparison versus underlying market fundamentals, 143–154

using the sales comparison approach in valuing economic loss from regulatory taking related to flood maps, 46–48

using the sales comparison approach in valuing timberland, 215–217

Scholarships
announcement of winners of Appraisal Institute Education Trust scholarships, 350–351

South Korea
market trends in South Korea, 23–24

Surveys
determining applicable capitalization rate from surveys, 236–238

survey data on mitigation ban prices and costs, 131

survey research and the debate on its use in valuation assignments, 302–303

timber survey as comprehensive quantitative assessment of timber, 212–221

Takings
flood zone revisions and economic loss for commercial property, 44–55

Florida Private Property Protection Act (Harris Act) compensation for property owners experiencing economic loss from regulatory taking, 45, 53

using the sales comparison approach in valuing economic loss from regulatory taking related to flood maps, 46–48

Taxes
comparison of sale prices of land sold to in-state and out-of-state buyers in like-kind exchanges, 62–64

going concern valuation and earnings before interest, taxes, depreciation, and amortization, 234

impact of tax-deferred exchanges on sale prices of agricultural land. 57–65

Timberland
alternative qualitative approaches to valuation of land with timber, 212–222

approaches to valuing timber, 216–217

timber-related terminology and definitions, 214–216

Uniform Standards of Professional Appraisal Practice (USPAP)
USPAP and Interagency Appraisal and Evaluation Guidelines compared, 250–256

USPAP provisions related to permissible approaches to arrive at credible appraisal, 206, 209–211

USPAP required elements for appraisal reports, 246–247

value allocation requirements under USPAP, 250–252

United States Army Corps of Engineers
US Army Corps of Engineers wetlands policies and data, 126–134

Value in use
Interagency Appraisal and Evaluation Guidelines on value in use, 253

Verification
appraisal review and quality control, 241–248

verification of timber maturity as part of valuation of land with timber, 219

verification requirements in and Interagency Appraisal and Evaluation Guidelines, 251–253

Water
flood waters and flood risk map effects on value, 44–56

Weighted average cost of capital (WACC)
weighted average cost of capital applied to mitigation bank cash flow, 131, 135

Wetlands
like-kind exchanges and wetlands, 59–60

valuing properties with wetland potential, 126–142

wetlands and regulatory takings, 45

Wind Farms
capital costs and tax credits for wind farms, 29–31

renewable energy standards affecting wind farm development, 31–33

wind farm valuation, 34–41

Cases in Brief

Absent sufficient circumstances of unfairness, court not required to set aside foreclosure sale even if sale proce is greatly inadequate, 7–8

Adverse use by member of a class does not qualify all members for prescriptive easement, 275

Agricultural exemption does not apply to homesite and residential improvements, 273–274

Appraisers make valuation determinations only; insurer liability is a judicial determination, 274

"As is" valuation is appropriate when extent of restoration and specific restored condition are unknowable, 98–100

Assessors allowed to consider existing use of property when determining fair market value, 6–7

Clearly defining highest and best use of property is important so appraiser can find comparable sales, 4–5

Contaminated property taken by eminent domain should be valued as remediated when determining condemnation award, 1–2

Damages are based on diminution in value of the total acreage, not just the portion damaged, 93

Date of conduct determines statute of limitations in professional negligence causes of action, 275–276

A debtor does not lose his homestead by using a portion of it for business purposes, 97–98

Deducting cost to complete construction from the subject-to market value of property is a proper method to value incomplete home, 5–6

A defaulting purchaser's risk and expense is limited to the damages resulting from his default, 185–186

Emission reduction credits can be considered in determining fair market value, 273

Foreclosure sale for full judgment amount deemed adequate as a matter of law, 94–95

Intent may be inferred in inverse condemnation case if the natural and ordinary consequence of government action was substantial interference with property rights, 183

An interloping purchaser is not entitled to entrepreneurial or residual profits, 95–96

Just compensation determined by what owner has lost, not what condemnor has gained, 96
